

RESTAURANT RECOMMENDER SYSTEM

Problem Description

Fast food chain owners constantly look out for new geographies to expand their business. The problem lies in where they should open up a new restaurant to minimize the risk of loss. In order to find the best place to do so, the study of the area needs to be done. Further this includes:

1. Are there enough people available with sufficient income level to enjoy the services?
2. What is their age group?
3. What is the nearest location for every customer?
